

Amendments to the Claims:

Please delete claims 1-3 and add the following new claims:

4. (New) A fire fighting helicopter of the type that includes in the fuselage reservoirs of the fire fighting liquid for the extinguishing of fire, which includes a launcher for controlling the quantity of the fire fighting liquid under pressure, wherein the launcher is set in the front of a lower deck and a restriction plate in a main reservoir of fire fighting liquid is vertically mobile between stable guides, so that it always restricts the quantity of fire fighting liquid that is inside the reservoir stable between solid walls, avoiding in this way the movement of its center of gravity.

5. (New) A fire fighting helicopter according to claim 4, wherein the front section of the fuselage of the helicopter is vertically divided in two decks from which the upper constitutes the cockpit and the lower which has sufficient space in order for it to receive in lying position an operator who operates the launcher of the fire fighting liquid, and also controls the direction of the said launcher.

6. (New) A fire fighting helicopter according to claim 4, wherein the restriction plate of the main reservoir of the fire fighting liquid is shifted vertically with the help of two vertical, worm screws operated by an electric motor.

7. (New) A fire fighting helicopter according to claim 5, wherein the restriction plate of the main reservoir of the fire fighting liquid is shifted vertically with the help of two vertical, worm screws operated by an electric motor.
